Difference Between Solution to and Solution for

The three types of solution sets: A system of linear equations can have no solution, a unique solution or infinitely many solutions. A system has no solution if the equations are inconsistent, they are contradictory. for example $2x+3y=10$, $2x+3y=12$ has no solution. is the rref form of the matrix for this system.

The three types of solution sets:

an easy/innovative solution; a possible/practical/long-term solution; Do you have a better solution? solution to something There's no simple solution to this problem. the solution to a crisis/an issue; Will this lead to a peaceful solution of the conflict? Technology must become part of the solution, rather than part of the problem.

Many students assume that all equations have solutions. This article will use three examples to show that assumption is incorrect. Given the equation $5x - 2 + 3x = 3(x+4)-1$ to solve, we will collect our like terms on the left hand side of the equal sign and distribute the 3 on the right hand side of the equal sign. $5x ...$

How to Know when an Equation has NO Solution, or ...

The equation has no solutions. It was not helpful to have multiplied both sides of the equation by zero. It would have been better to have started by subtracting x from both sides, resulting in $0 = 2$, resulting in a false statement telling us that there are no solutions. Answer. There is no solution.

Special Cases and Applications

It depends on the context. The main distinction is that solution has more than one meaning: An answer to the problem (fully worked out), but also; The process of finding such an answer (i.e. a synonym for solving) Something dissolved in something else (say, sugar dissolved in water) With the first meaning, use to: I have found a solution to your problem.
