The rate of the pulsation system is the number of times the inflation opens and closes per minute, which is referred to as pulsations per minute (PPM). Parts Dept.'s pulsators cover a wide range of rates between 45PPM to 75PPM. The pulsation ratio is defined as the percentage of time the inflation is in the milking phase or the rest phase.

Using either alternate or simultaneous pulsation patterns in mid-level or low-level milking systems had similar effects on teat tissue changes and on milk yield per cow. However, shorter milking times were observed with an alternate pulsation pattern and narrow-bore liners in a low-level milking system than with a simultaneous pulsation pattern and wide-bore liners.
