Let  $x$  be a real number. If  $x < \epsilon$  is true for all real numbers  $\epsilon > 0$ , then  $x = 0$ . This statement is the general idea of what we do in analysis. Suppose next we really wish to prove the equality  $x = 0$ . In analysis, we prove two inequalities:  $x > 0$  and  $x < 0$ . To prove the inequality  $x > 0$ , we prove  $x < \epsilon$  for all positive  $\epsilon$ .

The real world is always much more complex than the models we use to understand the world. That doesn't make the model useless, indeed, exactly the opposite. By stripping out extraneous detail, the model represents a lens to isolate and understand aspects of the real world. Finally, one last introductory warning before we get started.

Pareto efficiency or Pareto optimality is a situation where no individual or preference criterion can be better off without making at least one individual or preference criterion worse off or without any loss thereof. The concept is named after Vilfredo Pareto (1848-1923), Italian civil engineer and economist, who used the concept in his studies of economic efficiency and income distribution.

Science in a broad sense existed before the modern era and in many historical civilizations. Modern science is distinct in its approach and successful in its results, so it now defines what science is in the strictest sense of the term. Science in its original sense was a word for a type of knowledge, rather than a specialized word for the pursuit of such knowledge.
